

Digitally Mediated Urban Mobility: Barrier-free for People with Anxiety Disorders?

Researching Use and Usability of Passenger Assistance Systems and
Communicative Support in Vienna's Urban Public Transport.

Urban public transport in Vienna, Austria

- Complex public transport infrastructure
 - Buses, trams, subway, trains
- 2 mio passengers every day (almost)
- High accessibility standards, however:
- **Barrier-free infrastructure** does not yet support the needs of people with phobias, anxiety and compulsory disorders
- Research gap
 - How can information and communication technology (ICT) support accessibility for people with anxiety disorders?

© Wiener Linien

Why is **participation** in public transport important for people with **anxiety disorders**?

© Wiener Linien

- **satisfaction of daily needs:** therapy, doctor visits
- **social needs:** integration in groups, social activities
- **mastering of everyday tasks:** work mobility, shopping

“Mobile without Fear” Research Project in Vienna (2020-2022)

- **potential** of information and communication technology (ICT)
 - digital route planning applications, real-time location-based services, and future technologies
- to enable people with **anxiety** disorders
- to use **public transport**

- interdisciplinary project team
 - communication scientists, traffic psychologists, mobility planners, and experts from public transport provider “Wiener Linien”

Sensitive Method Mix

- 12 qualitative **semi-structured interviews** and 3 accompanied **mobility walks**
- **Purposive Sampling:** 20-59 years old, 7 female, 5 male, wide range of anxiety disorders
- Qualitative content analysis
- High **ethical standards** for academic research

Anxiety disorders

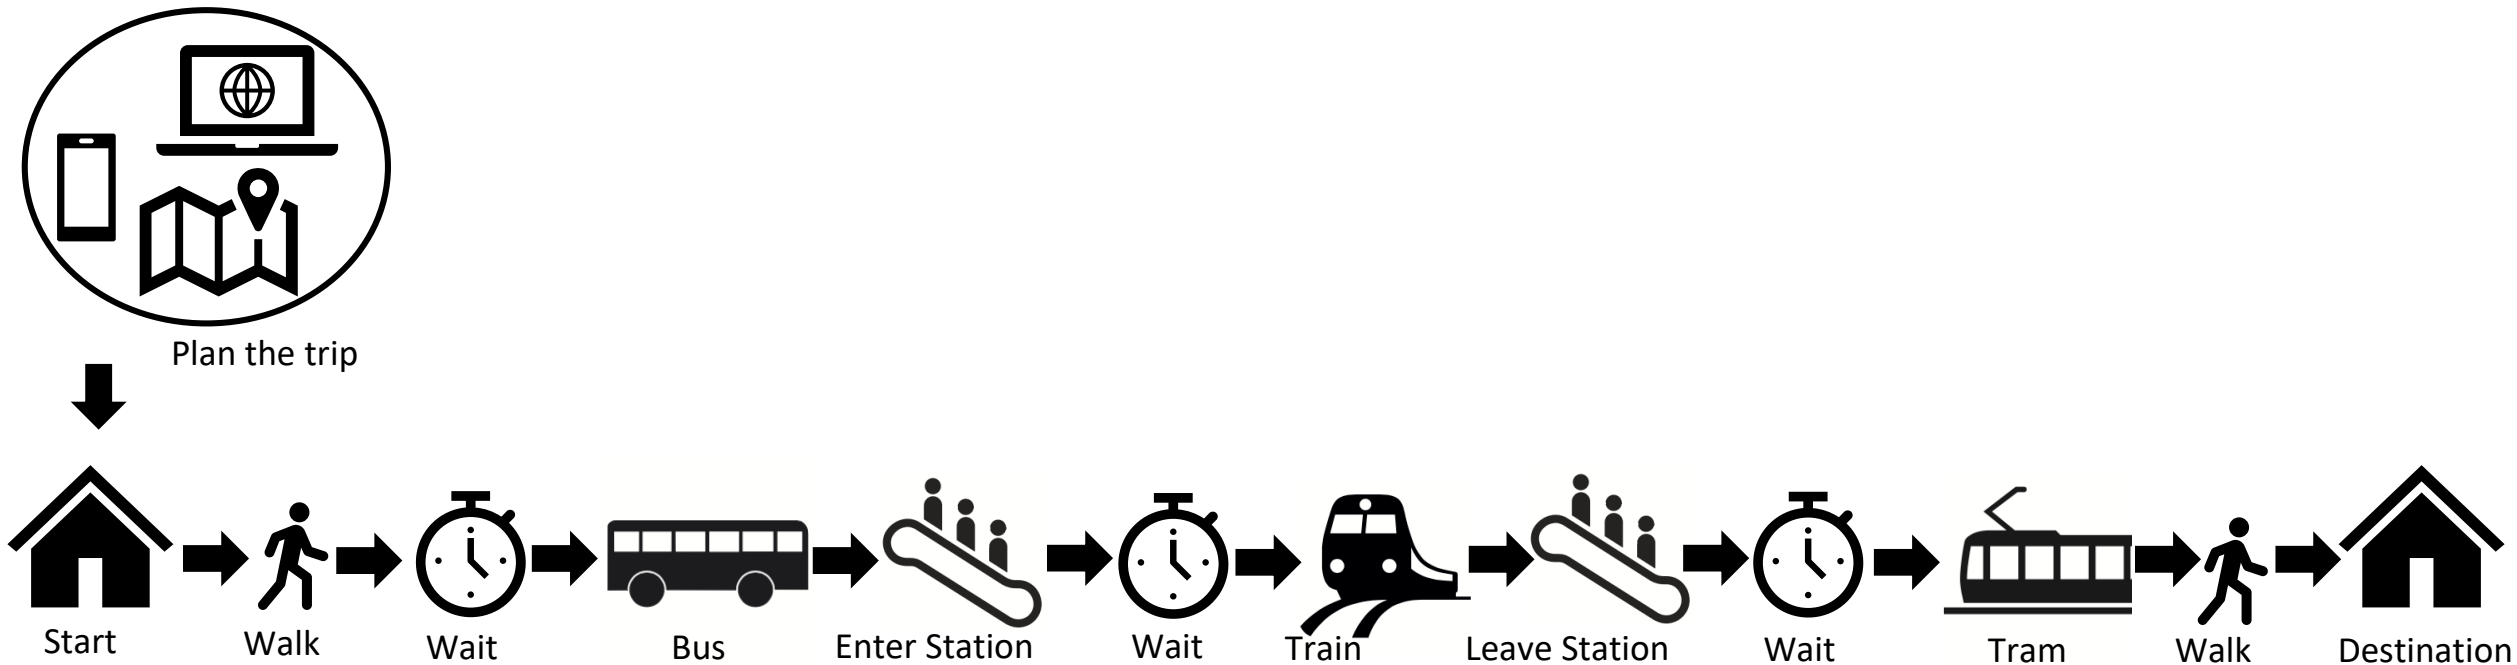

diverse

comprise not only **everyday anxieties**, **fear**, and **phobias**,

but also obsessive **compulsive disorders**, **panic attacks** and (not diagnosed) **depression**.

Travel Chain Perspective

*“Applying the travel chain perspective in research emphasizes that all links while moving from origin to destination are included, and **all dimensions of travelling** have to been taken into consideration.”* (Carlsson 2004; p. 78)

For people with anxiety disorders, different parts of a journey with public transport could present as a barrier to travel

Paula, 23

“I'm afraid of not having an escape route. And on public transport you are in a closed vehicle, where you cannot get out at any time.”

Inge, 37

“Changing lines is very stressful for me: I must not miss the stop where I have to get off. Then I have to look for the next vehicle. And in the worst case I even have to hurry up.”

Sarah, 30

“I fear crowds. Environmental changes. Loss of control.”

Usability, Accessibility and Functional Capacity (Carlsson 2004)

Media domestication (Silverstone, Hirsch & Morley 1994)

Carlsson, Gunilla. (2004). Travelling by urban public transport: Exploration of usability problems in a travel chain perspective. *Scandinavian Journal of Occupational Therapy - SCAND J OCCUP THER.* 11. 78-89.

Silverstone, Roger; Hirsch, Eric & Morley David (1994). Information and communication technologies and the moral economy of the household. In Roger Silverstone & Eric Hirsch (Hrsg.), *Consuming technologies: Media and information in domestic spaces* (S.15-31). London: Routledge.

RESULTS: App Use in Sample

YES for “pre trip” information

- Control of departure times
- Environmental information
- Individual trip planning/checklists

NO for „on trip“ situations

- Stressful
- Confusing for orientation
- Restricted data volumes
- Lacking access (WLAN)
- Fear of loosing the smartphone

The interviewees

- complain about the **poor design**: tools lack intuition and convenience
- stress the usability of *Google Maps/Earth* for route planning and overview (shopping areas, restaurants, toilets) **“One-Stop-Shop”**

RESULTS

Plan the trip

Paula:
searching
safe spaces

Start

Walk

Wait

Bus

Enter Station

Wait

Train

Inge:
planning a
detour

New plan

Save Space

Sarah:
distraction

Tram

Wait

Train

Leave Station

Wait

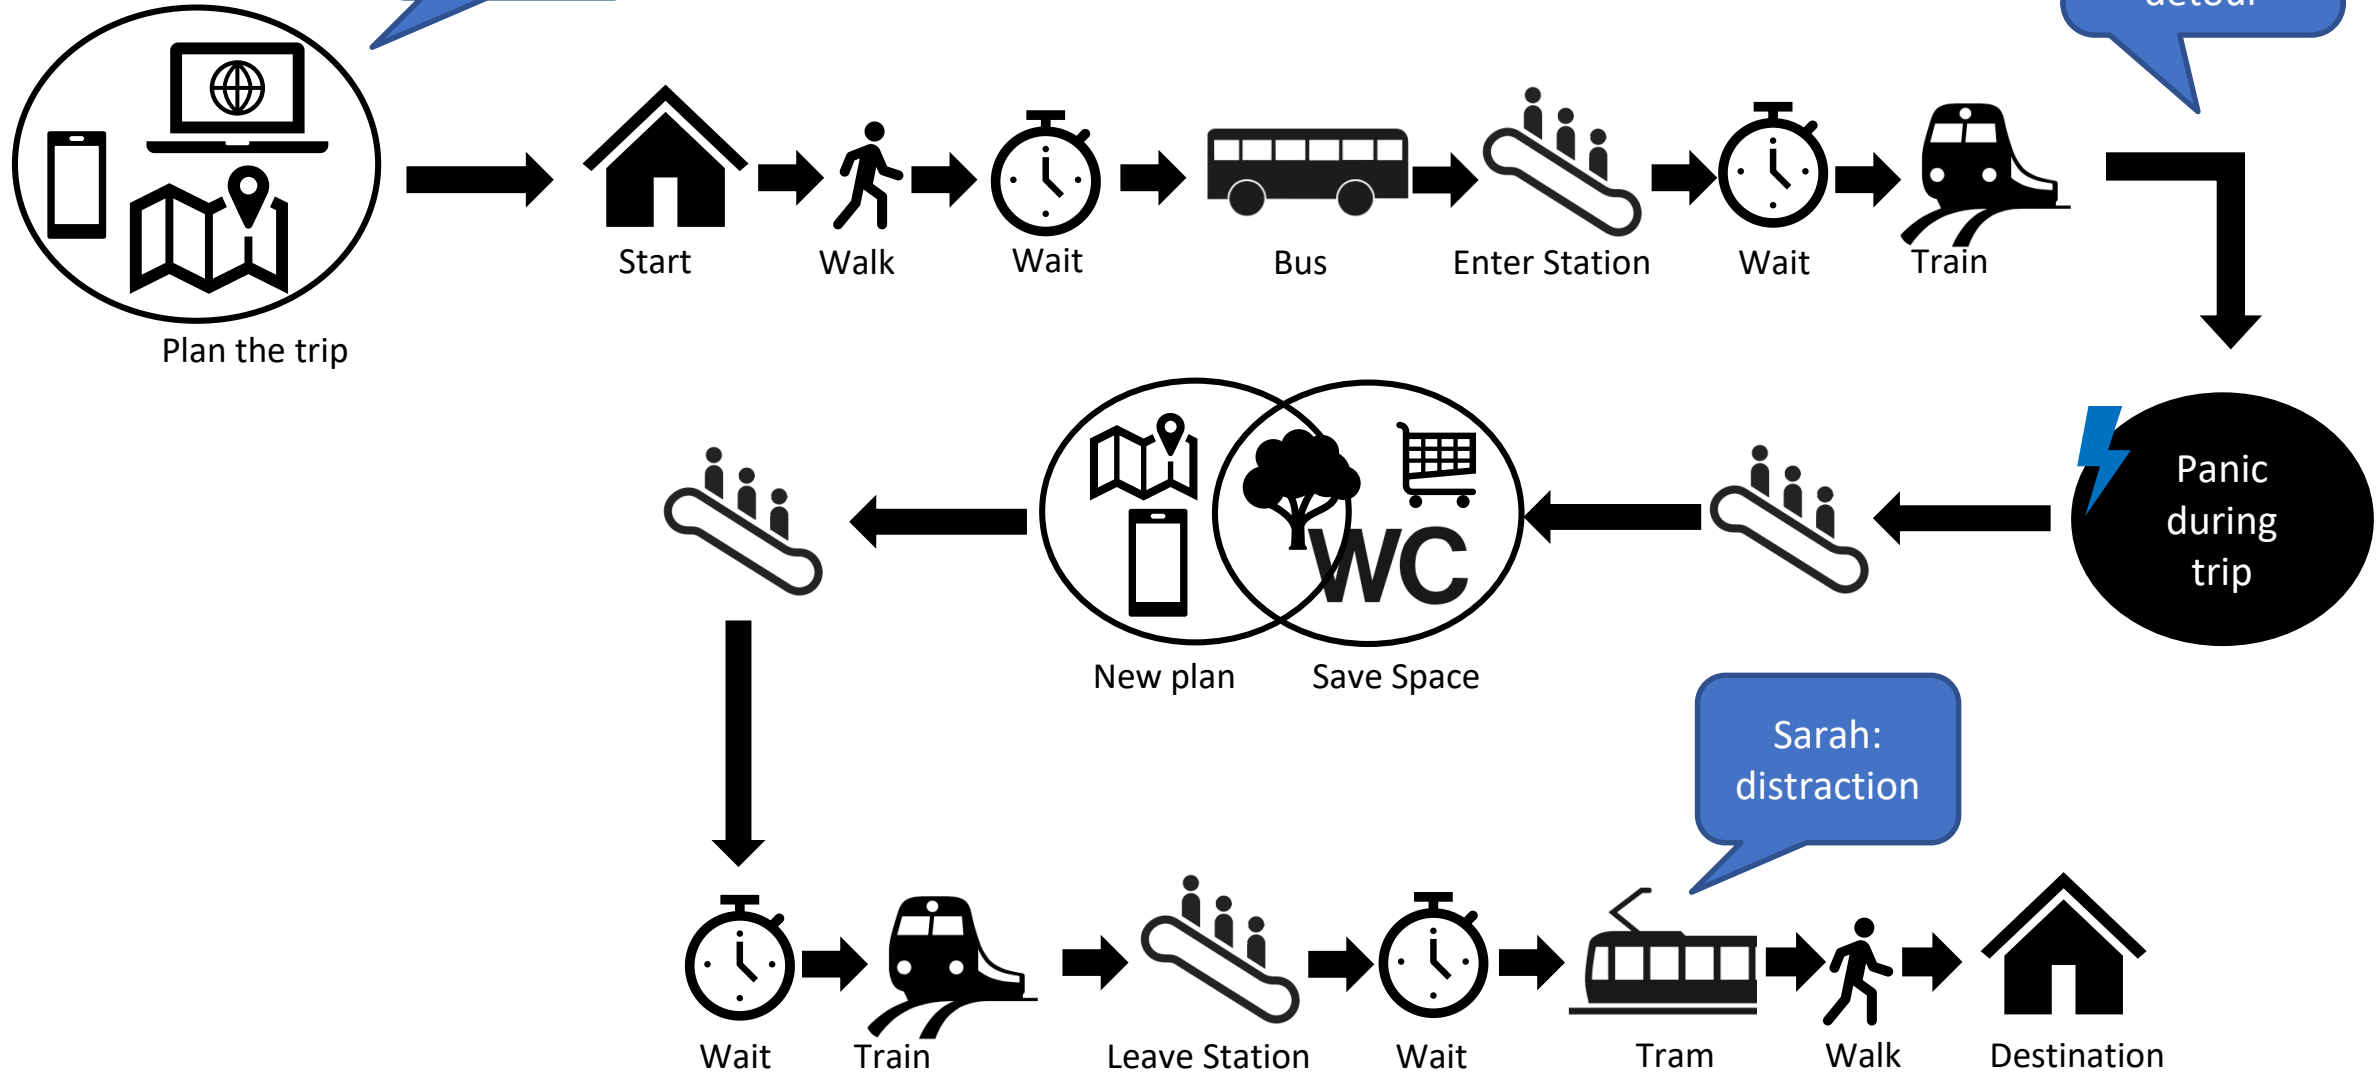

Walk

Destination

- The potential of ICT
- enabling **strategic mobility**
 - simplifying **orientation**
 - providing **emotional support**

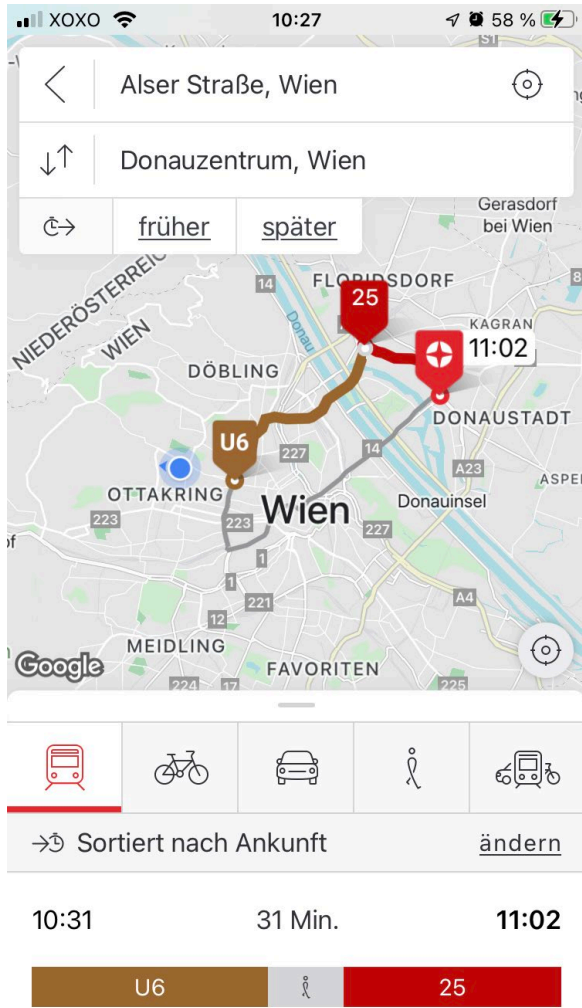

RESULTS

RESULTS

ICT enables strategic mobility

What helps Paula?
Information!

©Wiener Linien

©Wiener Linien/Johannes Zinner

©Wiener Linien/Robert Peres

RESULTS

ICT simplifies orientation

What helps Inge?
Organizational support!

©Wiener Linien/Helmer M.

©Wiener Linien/Peres

©Wiener Linien/Thomas Jautzen

RESULTS

ICT gives emotional support

What helps Sarah?
Mood management!

©Wiener Linien/Helmer M.

©Wiener Linien/Johannes Zinner

Results

Beyond ICT – what else could help?

- **Deep understanding** and public awareness for anxiety affected passengers (= SOCIAL support)
- **Human interfaces** (trained service personnel in stations and on board) (= EMOTIONAL & SOCIAL support)
- **On trip trainings and tutorials** (= PLANNING and ORGANIZATIONAL support)

Conclusion

- Current ICT planning tools show a **lack of usefulness** and usability
- People with anxiety disorders require **more human interfaces**, also via ICT
- All stages of the public transport travel chain should be as **predictable** as possible:
 - „Easy information is key“
 - „User centered design“
 - „One ICT Solution for all“
